

Frequent Accidents involving damaged buried pipes!

Please be sure to check with other companies!

① Checks before construction

Before construction begins, confirm the location of other company's buried pipes with the Buried Object Manager.

When working near buried pipes of other companies, do so by hand digging, etc.

② Check with the Buried Object Manager if you have questions

When the location or depth of the buried pipes of other companies are unknown, or when the buried pipes need to be removed or relocated.

Also consult on other matters with the Buried Object Manager as necessary.

③ Safety checks before performing work

Share information such as the location of buried objects, etc.

with all workers prior to the start of work.
